

MATERIAL EMPIRE BULL SALE

Welcome Beef Producers,

What a year is it has been would be a mild way of relating to this past 12 months. We had to welcome change weather we wanted to or not. Those in the west also had the added headaches of a drought starting in May while those in the east had more forced regulations on all lifestyles. Change is hard in the beginning, messy in the middle, and good in the end. Like for example as I write this, we had 50+mph winds for 3 days and had to fires on neighbors, positive note I took from it was we had no trouble finding those "loved" masks to go fight fire for once.

New this year to the sale will be that we had the opportunity to feed efficiency test almost all of the bulls at Lincoln County Feed yard. In June the bulls went on an 80-day test to evaluate individual conversion of intake to gain. We hope to be able to continue to do this test to identify sire groups of cattle that work even better once they are placed on feed. After the test the bulls were placed back on grass only till December and then taken to Burnham's to get ready for the sale. We have identified cattle that produce pounds on grass better than anyone else selling seedstock and that will always be our primary goal but with this test hopefully we can identify cattle that do it all with measured data.

Also new with the potential governed regulations we are adding DV auction and live bidding from home if you can't attend the sale. We will have a video of all the bulls selling so you can view them from home if needed. I still encourage all to come look at the bulls if at all possible, your eyes are still better than paper and video.

This set of bulls is the best we have ever been able to put together in one sale. I am the most excited about this offering and what they will do for your calf crops. Progeny from these bulls will be easy to sell as feeders in whatever venue you choose. Making my job easier in placing these cattle in feed yards and the reason it gets easier is once they have the results, they will bid next time knowing the cattle are for real. On a side note of placing cattle it is getting way easier I now have major feed yards that will bid on Cedar Top sired cattle because of the data your cattle have produced for them. I truly believe the producers that create seedstock on paper and output only are making cattle that are harder to feed. We have always judged these cattle from the ground up and head back, never chasing fads or single trait selecting. We use bulls that are solid in aspects that make a profit for our customers.

This years offering will include over 50 ET bulls from proven cows. We only use proven cows because we don't want to sell a mistake that is more than often produced from flushing and propagating young heifers that haven't proven if they have the fertility and production capabilities. On a high and sad note is this will be the last major offering of sons of the great 198L cow. We lost her in the spring blizzard of 2019. Her influence will last forever in our cowherd with over 40 daughters, if you want to make cows that will last in your herd look up her 17 sons selling. 5 other proven donors have sons selling that will just as impressive and from cows that are elite in production, fertility and quality.

If you want cattle that work for you this is the one operation that requires our cows to work for us without added inputs. The dams of these bulls are proven and elite in kind of true production and fertility. These cattle will keep you in the beef business. We are excited about the beef industry and value you as our partner in the beef supply of sustainable beef genetics. We thank you for your interest and hope to visit soon.

Sincerely,

Scott Starr

P.S. Also new is 50 bred heifers form Burnham's that are all baldie heifers bred A.I. to our Balancer sale topper in 2019 or cleaned up with a Balancer bull form our operation. Balancer on Baldie has always been magical.

Neither the sale host, sale facility, sale management, nor auctioneer assumes any liability for any accidents which may occur.

DELIVERY & TRUCKING:

Cedar Top Ranch and Johnson Gelbvieh will cooperate in every way possible to deliver your bulls. Free delivery in Nebraska. Free delivery to surrounding states on purchases of \$7,500 or more. Free delivery to anywhere in the continental U.S. on purchases totaling \$30,000 or more. Bring your own trailer and deduct \$100 per head if hauled away sale day. <u>Deliveries will begin soon after the sale as bulls are older and don't require extra feed.</u> If this does not work, please notify us to make other arrangements before

VOLUME DISCOUNTS:

5-9 head......5% 10 or more 10%

GUARANTEE:

Unconditional first breeding season guarantee against death or injury. If something were to happen to your bull, Cedar Top Ranch and Johnson Gelbvieh will get a replacement for the season and give credit in our next bull sale. Credit for the amount of purchase less salvage value will be applied toward a replacement. Credit or liability can never exceed purchase price. The end of the breeding season guarantee shall be **September 1.** However, if you breed out of season (fall breed), notify us and we will adjust to your needs.

DNA for Homo Black and actual scrotal will be available sale day or call ahead and we will send a supplement sheet. DNA was not available at printing time. Sorry for the inconvenience.

This sale will be broadcast live on the internet.

Real time bidding & proxy bidding available.

HOT LOTTO SONS

BSF HOT LOTTO 1401

Hot Lotto has been a great addition at CTR. Lotto has become the leading Cash son for performance and docility. His daughters have proven to be much more useful than his sires in production, fertility and uniformity. Use sons if added pounds are needed and extremely docile wet daughters are desired for your cowherd. Lotto daughters at CTR are fast sorting to the top of females in their respective age groups and appear to be future lead matrons and possible donors at a young age.

HOT LOTTO SONS - LOTS 1-11

What an amazing flush. There has been a lot of solid large flush groups from 198L, but this flush of Lotto sons is arguably the best. Several from this flush could go to seedstock breeders and propel their programs forward faster than any other bull they can find. 198L may have saved her best for last and this will be the last sire groups to sell from her we put all the balancer embryos into cows so a little bittersweet. 198L sons have always worked where they have been used so a testament to her breeding value all these years, a cow that can positively influence herds for 15+ years of seedstock bulls can really describe her breeding value. The Lotto daughters of 198L that are now 4 years old have already established themselves as donor females. This mating is truly magical.

INDUSTRY BRED BULLS - LOTS 12-39

Lots 12-16 are an impressive flush of full brothers to a son that topped our sale a few years ago that we call Impressive and they are the largest individual sire group in this sale. The tumbleweed cow family has been phenomenal in kind, fertility, udders and adaptability. Sons and daughters from this cow family have excelled in 10,000 plus feet elevation and on fescue grass as well. If you want cattle that will make tremendous females, I highly recommend this flush and the sons by Impressive, their full brother.

Connealy Industry has been a proven stable breeding bull at CTR. They cover all aspects of beef production at CTR. Sons and daughters have proven themselves in production of steer weights and daughters have stood the true test...time. If you want cattle that will keep you in the cattle business regardless of environment and management practices the Industry bred bull fit the bill.

SANDHILLS BRED BULLS

DAUGHTER OF CTR SANDHILLS 0065X • CTR LASS

Truly time-tested sire group. They do it all as well as any bull we have ever used at CTR. Steer progeny have topped Sales all over the country, at CTR we have bred all our commercial cows to him for years and have topped Superior Livestock sales every time. Feed yards love the cattle as they gain and grade with more soundness of structure and kind than most entering the yards. The daughters in production are optimum in milk production and breed back as well as anything we have ever tried. Sandhills is in the top 1% for heifer pregnancy and Preg 30, which means the cattle breed back raising a calf. Where I come from having a calf every year keeps you in the cattle business. Fertility is still the number one economic factor to cow calf operations and Sandhills is the breed leader of the best breed for fertility.

SONS OF GAME CHANGER

SONS OF GAME CHANGER - LOTS 51-56

Unique outcross sire line we have used through ET and A.I. at CTR. The cattle appear to fit the mold of problem free production we strive to achieve at CTR. The cattle grow and have volume with correct structure. We also used his sire Y6 for a more performance line for producers looking for more pay weight in their calves. Some of our top bred heifers look to be Game Changers and we can't wait to see them in production.

Impressive flush for lots 51-56. Six full brothers and 4 ¾ brothers to them. Game Changer is an outcross we identified as a top Balancer bull to add to our program. Flushing him to the time-tested elite donor cow 7228 produced outstanding bulls that will take any program in the right direction. Use these bulls to add pounds and elite daughters to your replacement pen. Balance of numbers and a balance of kind make these 6 full brothers a must add.

SEEDSTOCK

Eldon and JW Simonson found this bull at Kraye Angus and we had already purchased a daughter from his dam, so we knew the cow family was elite. They had to outrun other top seedstock producers and A.I. studs but in the end, we brought him home. Seedstock is very impressive in his physical makeup and has a disposition similar to Hot Lotto. The first daughters at CTR, Simonson, and Kraye's look flat awesome. Use this bull for growth, volume, structure and disposition. They are the right kind!

SONS OF COWBOY UP AND 301N

What an outstanding flush of breed leading bulls. Sired by what I call the meat and potatoes Angus bull Cowboy Up and the elite sandhills cow family. The dam 301N is still in the top 15% for higher for 6 measured EPD traits. The cow power of the Sandhills line over time is simply amazing. These sons will produce daughters that will stand the test of time over the next 20 years as well. We lost 301N in the spring storm of "19 at the age of 16. This will be the last set of sons for this prolific donor as well and what a set they are. Buy with confidence these are going to make cattle that are profitable in all aspects of the beef industry.

SONS OF WHO'S THAT - LOTS 89 - 91

Tiger son that Eldon and Lowell Minert found in Canada and man has he produced the kind that work for a living and look good doing it. WT is one of the most impressive individuals you will ever see, stout, full of muscle, wide based and sound as a cat. Daughters are getting old enough to really prove they are the right kind and survive in the Sandhills with anything out there. WT is a lot like Cowboy Up just a meat and potatoes bull that gets it done.

SONS OF CLASSIC - LOTS 92 - 96

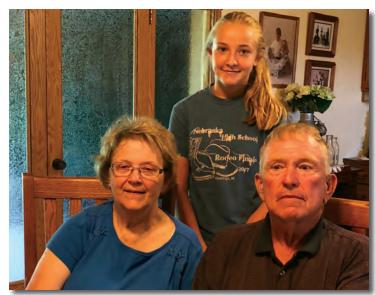

Classic is the first Balancer bull to win Supreme Bull over all breeds at the NCC. But we bought him before that based on his elite Red Angus sire and cow family. Semen was hard to get and everywhere I had seen progeny of Firestorm I liked them. The cow family is one we had followed since the early 2000's and had brought in one daughter that had really produced. The early view of the progeny is exceptional and can't wait for daughters to get into production. Use classic for style, growth, added volume and soundness.

SONS OF JACKPOT & WIDE TRACK

SONS OF JACKPOT - LOTS 99 - 100

Jackpot 8660 is a full brother to 6C & maternal brother to Wide Track, ANSWER 6809 & Industry 3719

JACKPOT

Elite performance bull here that will probably forever get labeled a full brother to JP 8660 that topped our sale last year at 35K. But I'm telling you 6C is already proven and really produces growth and real muscle with the added great functional cow backing him up in 198L. Use 6C sons for power and performance.

SONS OF WIDE TRACK

Wide Track is the maternal line sire from the great herd bull producing cow 198L. Moderate in their growth but wide made and easy fleshing are what the Wide Track cattle are. Daughters look to follow in the footsteps of 198L. We are using Wide Track on a lot of Angus cows as the daughters appear to be the kind to survive on oxygen and scenery. Use Wide Track sons if you need to increase fleshing ability or just want low input cows that give you so many options. Wide Track daughters will be at CTR for years and if they produce like 198L you'll want to get as many of these sons as possible.

SONS OF DIE CAST & POWER BUILT

SON OF DIE CAST - LOTS 106

3G DIE CAST 637D

Outcross performance bull that we sampled but got mostly females. Powerful performance bull that will give you real muscle.

SONS OF POWER BUILT - LOTS 106

Outcross genetics that we purchased to clean up Red and Black Angus cows to make the great 3/8's Balancers that we strive for in our program. We lost him in the winter of 18-19 as he slid down a steep hill of ice into a ravine so this will be the only crop of bulls. E616's dam sold in the past year for over 40K and we purchased a full sister to try and get more of the cow family. Use the E616 sons for added muscle and performance with outstanding cow power behind them.

Answer 6809D came from one of the most popular flushes ever at CTR. After getting progeny from 6809 it is easy to see why he will be popular for some time. The cattle are born moderate at birth and grow into wide made sound progeny that are above their contempories at weaning and most importantly they are just beef cattle. 6809 will be used heavily at CTR for years based on the first 2 calf crops. Full sisters are just as impressive with perfect udders, broody made and great foragers.

Lot 119...Wow what a bull. Performance that is as good as it can get while keeping birth in check. Capital Asset will be a big-time bull and if you want to add a big-time bull then here is your opportunity. 316 X full sister to Wide Track which makes 198L the granddam. Every daughter of 198L has produced at the top of their groups. Capital Asset will make bulls or steers that perform and females that will be the front pasture kind. Don't miss this opportunity to move your program forward.

SONS OF GOOD NIGHT - LOTS 120 - 126

Long time-tested calving ease genetics here. Goodnight cattle have been known for years for their ability to sire structural correctness that exceeds all other cattle more consistently and they offer calving ease as well. Productive females and steer progeny that far exceed all other calving ease bulls for growth make the goodnight cattle a solid choice. Cattle that are structurally sound always gain better in

feed yards and grade better on the rail than cattle that may have more genetics for both traits. However, their best advantage is the daughters they leave behind.

Lot - 125-126 - Balanced trait sons of the great 841U and Edison. 841U has and will continue to be one of the most prolific donors for producing herd bulls. These 2 bulls should make a set of daughters that will stick with you and move your cowherd forward.

SONS OF LIFELINE

SONS OF LIFELINE - LOTS 127 - 131

Lifeline is a proven calving ease bull that offers a unique balanced look to his progeny. Lifeline sons have topped sales and females in production look promising. Additionally, for calving ease sires, Lifeline adds more muscle down the top and more shape from behind. If calving ease and muscle are your needs, then Lifeline is your choice.

SONS OF BARRET

CTR CTR BARRET 6538D

6538 turned out to be a surprise on the calving ease side. After 2 calf crops, he will be our heifer bull for a few years and an exciting one at that. 6538 calves are deep sided and sound and yet still have performance. Backed by one of the most efficient cow lines at CTR make him a logical choice for calving ease and daughters that wean more pounds of calf/ cow weight.

HOT LOTTO SONS - LOTS 200-206

Impressive flush of Lotto's from the great T309 cow. We hope to have 40+ daughters of T309 before she quits flushing. This is because the ones we have are just that good. The Lotto daughters look really promising. These Sons will sire the right kind of females for the sandhills with a little more grow than most. This cross may be as good as we have ever offered.

Very impressive son of 987. 987 we bought from the Ox Bow program in Montana for a donor female with outcross maternal lines. We lost her to lightning so this will be all we ever have from her. This lotto son is very impressive and should make an excellent set of steers and heifers.

Lots 217-219 are Industry sons from an old cow that produced many sale topping bulls during the 2000's. We flushed these old cows and never got DNA pulled so these bulls will be selling as commercial, we are sending all the progeny DNA in to hopefully get a registration number. It doesn't change the bulls a bit or their breeding value. These are truly time-tested genetics that will keep you in the cow business.

Calving ease bull with excellent performance.

EXPECTED PROCENY DIFFERENCES

Below is an exhaustive list of the expected progeny differences (EPDs) and index values provided by the AGA along with a definition of each trait that is measured. Since AGA's release of BOLT-powered EPDs on August 6, 2018, the majority of EPDs are BOLT EPDs, which means that Gelbvieh and Balancer® animals BOLT EPDs can be directly compared with other animals in the registries of other partner breed associations within the International Genetic Solutions (IGS) group. Gelbvieh and Balancer EPDs that are excluded from BOLT include: heifer pregnancy, 30-month pregnancy, and dry matter intake. The \$Cow, efficiency profit index, and FPI™ indices are unique to the AGA and are not comparable across breeds.

MATERNAL TRAITS

Calving ease direct (CED): Percent of unassisted births of a bull's calves when he is used on heifers. A higher number is favorable, meaning better calving ease. This EPD can be vital to a rancher looking to decrease the amount of calves pulled in his herd.

Milk (MILK): The genetic ability of a sire's daughters to produce milk expressed in pounds of weaning weight.

Calving ease maternal (CEM): Represented as percent of unassisted births in a sire's first-calving daughters. A higher number represents more favorable calving ease. This EPD is important to a rancher's bottom line because it predicts which animals produce daughters with a genetic pre-disposition to calve unassisted as heifers.

Heifer pregnancy (HP): Predicts the probability that a bull's daughters will become pregnant as firstcalf heifers in a regular breeding season, expressed as a percent. A higher value of this EPD is favorable, meaning that a higher percentage of a sire's daughters get pregnant as first calf heifers compared to other sires in his contemporary group.

30-month pregnancy (Pg30): Predicts the probability that a bull's daughters will become pregnant and calve at three years of age, given that they calved as first-calf heifers. This EPD is expressed as a percent, again, with a higher number being more favorable meaning a higher percentage of a sire's daughters will calve at three years of age, given they calved as firstcalf heifers

Stayability (ST): Predicts the genetic difference, in terms of percent probability, that a bull's daughters will stay productive within a herd to at least six years of age. The stayability EPD is one of the best measures currently available to compare a bull's ability to produce females with reproductive longevity.

GROWTH TRAITS

Birth weight (BW): Predicts the difference, in pounds, for birth weight of the calf.

Weaning weight (WW): Predicts the difference, in pounds, for weaning weight (adjusted to age of dam and a standard 205 days of age). This is an indicator of growth from birth to weaning.

Yearling weight (YW): Predicts the expected difference, in pounds, for yearling weight (adjusted to a standard 365 days of age). This is an indicator of growth from birth to yearling.

CARCASS TRAITS

Yield grade (YG): Differences in yield grade score, which is a predictor of percent retail product. Smaller values suggest that progeny will have a better lean to fat ratio.

Carcass weight (CW): Differences in pounds of hot carcass weight, adjusted to an industry standard age endpoint. Ribeye area (REA): Differences in ribeye area in inches between the 12th and 13th rib. Greater ribeye areasare preferable.

Marbling (MB): Predicts the differences in the degree of marbling within the ribeye as expressed in marbling score units. Greater marbling numbers are preferable and are an indicator of higher carcass quality grades.

Fat (FT): Differences for fat thickness, in inches, for a carcass over the 12th rib, smaller numbers of fat thickness are preferable as excess fat can be detrimental to yield grade.

EFFICIENCY TRAITS

Dry matter intake (DMI): Represents the average daily dry matter intake per day consumed in pounds. A negative, or lesser value, is more favorable. For example, Bull A has a DMI EPD of .15 and Bull B has a DMI EPD of .20, so the progeny of Bull B consume, on average, .35 pound less dry matter per day than progeny from Bull A.

INDEXES

Total maternal (TM): An index that combines growth and milk information as a prediction of the weaning weight performance of calves from a sire's daughters. As an index, this value is not reported with an accompanying accuracy. A greater TM value means a mother returns comparatively higher weaning weights on her calves. TM Index = MK EPD + $\frac{1}{2}$ WW EPD.

\$Cow: Represents the genetic value in dollars of profit of an animal when retained as a replacement female relative to other animals in the herd. A higher number represents more profitable genetics for maternal productivity. \$Cow will serve producers in selecting bulls that will sire daughters with stayability and reproductive efficiency as well as other traits that lead to profitability in a production system, such as milk, calving ease, moderate mature weight and the ability of calves to gain. A female's genetics also influence the performance of her calves in the feedlot and at slaughter, so traits such as feed efficiency and carcass value are also included in \$Cow.

Efficiency profit index (EPI): An economic selection index developed to aid producers in selecting for more feed efficient cattle that still have acceptable amounts of gain. The EPI provides slight negative pressure on intake, while keeping gain at a constant value. By selecting on this index, producers will be able to find those animals that gain the same amount as their contemporaries while eating less.

FPITM: An economic selection index, which stands for feeder profit index, is designed to aid producers in selecting sires whose progeny will perform in the feedlot and are sold on a grade and yield standpoint. Well ranking sires for FPI have higher marbling and carcass weight than their contemporaries. As a terminal index, little emphasis is put on maternal traits such as stayability and calving ease.

MATERIAL EMPIRE BULL SALE

50 COMMERCIAL BRED HEIFERS

After all the numbered lots, there will be 50 commercial bred heifers from Berry and Heather Burnham. They are all black and red baldie heifers. They are Al bred to CTR LIFELINE 7756E and a clean up balancer. NOTES

Please bring this catalog with you on sale day.

DO ONE THING... DO IT WELL...WE RAISE BEEF CATTLE

43R ANNUAL MATERIAL EMPRE BULL SALE

FEBRUARY 16, 2021 • 12:30 PM BURWELL, NE
